PACE Indicators
Pressure Automated Calibration Equipment

User manual K0470
Introduction

This manual contains installation and operating instructions for PACE Pressure Indicators.

Safety

The manufacturer has designed this equipment to be safe when operated using the procedures detailed in this manual. Do not use this equipment for any other purpose than that stated, the protection provided by the equipment may be impaired. This publication contains operating and safety instructions that must be followed to make sure of safe operation and to maintain the equipment in a safe condition. The safety instructions are either warnings or cautions issued to protect the user and the equipment from injury or damage. Use qualified * technicians and good engineering practice for all procedures in this publication.

Pressure

Do not apply pressures greater than the maximum working pressure to the equipment.

Toxic Materials

There are no known toxic materials used in construction of this equipment.

Maintenance

The equipment must be maintained using the procedures in this publication. Further manufacturer’s procedures should be done by an authorized service agents or the manufacturer’s service departments.

Technical Advice

For technical advice contact the manufacturer.

* A qualified technician must have the necessary technical knowledge, documentation, special test equipment and tools to carry out the required work on this equipment.

Symbols

The equipment contains the following symbols to identify hazards.

This equipment meets the requirements of all relevant European safety directives. The equipment carries the CE mark.

This symbol, on the instrument, indicates that the user should refer to the user manual. This symbol, in this manual, indicates a hazardous operation.

Ce symbole, sur l'instrument, indique que l’utilisateur doit consulter le manuel d’utilisation. Ce symbole, dans le manuel, indique une situation dangereuse.

This symbol, on the instrument, indicates do not throw-away in domestic bin, hazardous material, dispose correctly in accordance with local regulations.

Unit Conversion

Convert FROM pressure VALUE 1 in pressure UNITS 1 TO pressure VALUE 2 in pressure UNITS 2, calculate as follows:

\[
\text{VALUE 2} = \frac{\text{VALUE 1} \times \text{FACTOR 1}}{\text{FACTOR 2}}
\]

1 Description

1.1 Introduction

The PACE Pressure Indicator measures both pneumatic and hydraulic pressures and displays, on a colour touch-screen, the measured pressure and instrument status. The touch-screen enables selections and settings in measuring modes. The instrument can be operated remotely through communication interfaces.

![Figure 1-1 PACE1000 General view](image)

The rear of the instrument houses all the electrical and pressure input connections. The electrical connections provide a power supply, serial and parallel communication interfaces, pressure ports and option ports.

The instrument can be used as follows:

- Free-standing instrument positioned on a horizontal surface.
- Rack-mounted in a standard 19 inch rack using the rack-mount option kit.
- Panel mount using the panel-mount option kit.
1 Description

Options available for the PACE1000 refer to the SDS.
Information and notes on applications (Ref: Reference and Specification, Section 6) or www.gesensinginspection.com.
PACE1000 Pressure Indicator User Manual

2 Installation

2.1 Packaging
Check the contents of the PACE1000 packaging with the list that follows:

Packaging List - PACE1000
i) PACE1000 Pressure Indicator.
ii) Adaptor, power supply (GE part number 191-370).
iii) User guide and safety instructions, and CD containing the full documentation suite.
iv) Calibration certificate.

2.2 Packaging for Storage or Transportation
To store or return the instrument for calibration/repair do the procedures that follow:

1. Pack the instrument (Ref: Reference and Specification, Section 6.13).
2. Return the instrument for calibration/repair complete the return goods procedure (Ref: Reference and Specification, Section 6.12).

2.3 Preparation for Use
The instrument can be used as a:

• Free-standing instrument positioned on a horizontal surface
• Panel-mounted using the panel-mount option kit (Ref: Section 2.5)
• Rack-mounted in a standard 19 inch rack using the rack-mount option kit (Ref: Section 2.5).

For free-standing instruments, the feet on the front of the base can be used elevate the instrument to a better viewing angle.

Note: Allow a free flow of air around the instrument, especially at high ambient temperatures.
2 Installation

2.4 Connectioning the Instrument

WARNINGS

TURN OFF THE SOURCE PRESSURE(S) AND CAREFULLY VENT THE PRESSURE LINES BEFORE DISCONNECTING OR CONNECTING THE PRESSURE LINES. PROCEED WITH CARE.

ONLY USE EQUIPMENT WITH THE CORRECT PRESSURE RATING.

BEFORE APPLYING PRESSURE, EXAMINE ALL FITTINGS AND EQUIPMENT FOR DAMAGE. REPLACE ALL DAMAGED FITTINGS AND EQUIPMENT. DO NOT USE ANY DAMAGED FITTINGS AND EQUIPMENT.

Pneumatic Pressure (Figure 2-1)

1. Refer to the SDS for the correct pressure mediums to be used.
2. Connect the Unit Under Test (UUT) to the required connection port.

Note: For instruments with NPT connections, use applicable pressure sealing.

![Figure 2-1, Sealing Pneumatic Connections](Recommended Method: alternative method below 100 bar)

Pneumatic connections

Connection

<table>
<thead>
<tr>
<th>Input</th>
<th>Reference</th>
</tr>
</thead>
<tbody>
<tr>
<td>G 1/8</td>
<td>G 1/8</td>
</tr>
</tbody>
</table>

For examples of adaptors (Ref: page 2 - 4).

Input Pressure (Figure 2)

1. Make sure the user systems can be isolated and vented.
2. Connect the Unit Under Test (UUT) to the output connection port.

Note: For instruments with NPT connections, use applicable pressure sealing.
Installation
The instrument connects to the Unit Under Test.

Input Pressure and Equipment
The pressure should not exceed 1.25 x full-scale or MWP stated on the rear panel of the instrument.

To protect the instrument from over-pressure a suitable protection device (such as a relief valve or bursting disc) must be fitted to prevent over pressurization.

Pneumatic Connection

**WARNING**
PRESSURE RANGES >210 bar (3000 psi) ARE ONLY RATED FOR HYDRAULIC USE.

Cautions
Do not exceed the maximum pressures stated in the appropriate Component Manual for the unit under test.

Reduce pressure at a controlled rate when venting to atmosphere.

Carefully de-pressurize all pipes to atmospheric pressure before disconnecting and connecting to the unit under test.

Connections
1. Switch off the power supply before connecting or disconnecting the instrument.
2. Use the appropriate sealing method for all pressure connections.
2 Installation

Method of connection G1/8

Adaptors

Refer to the data sheet SDS0014 for the range of adaptors.
HYDRAULIC LIQUID IS INJURIOUS. OBSERVE RELEVANT HEALTH AND SAFETY PRECAUTIONS. USE APPROPRIATE PROTECTIVE BARRIERS AND EYE PROTECTION.

BEFORE APPLYING PRESSURE, EXAMINE ALL FITTINGS AND EQUIPMENT FOR DAMAGE AND ENSURE THAT ALL EQUIPMENT IS TO THE CORRECT PRESSURE RATING.

DO NOT EXCEED THE MAXIMUM WORKING PRESSURE OF THE INSTRUMENT.

PURGE ALL AIR FROM THE HYDRAULIC LIQUID.

PRESSURE RANGES >210 bar (3000 psi) ARE ONLY RATED FOR HYDRAULIC USE.

DO NOT USE A SENSOR FOR GAS THAT HAS BEEN USED WITH HYDRAULIC LIQUID.

Cautions

Do not exceed the maximum pressures stated in the appropriate component manual for the unit under test.

Reduce pressure at a controlled rate when venting to atmosphere.

Carefully de-pressurize all pipes to atmospheric pressure before disconnecting and connecting to the unit under test.

Observe absolute cleanliness when using the instrument.

Severe damage can be caused if equipment connected to this instrument is contaminated.

Connect only clean equipment to the instrument.

To avoid any contamination, an external filter is recommended.
2 Installation

Installation
The instrument connects to the Unit Under Test.

Input Pressure and Equipment

1. The pressure should not exceed 1.25 x full-scale or MWP stated on the rear panel of the instrument.

2. To protect the instrument from over-pressure a suitable protection device (such as a relief valve or bursting disc) must be fitted to limit the pressure to below the MWP.

Note: For instruments with NPT connections, use applicable pressure sealing.

Figure 2-3, Sealing Hydraulic Connections
Hydraulic connections

<table>
<thead>
<tr>
<th>Connection</th>
<th>G 1/8</th>
</tr>
</thead>
</table>

**Note:** Pressure connections >210 bar are 9/16” 18UNF Male Autoclave.

1. Switch off the power supply before connecting or disconnecting the instrument.
2. Use the applicable sealing method for all pressure connections.
3. Isolate the hydraulic pressures and depressurise the pipes before connecting or disconnecting the instrument.

**Pressure input (Figure 2)**

1. Make sure the user systems can be isolated and vented.
2. Use the applicable sealing method for all pressure connections.
3. The hydraulic liquid must be clean, refer to specification given in the SDS.
4. Connect the Unit Under Test (UUT) to the appropriate connection port.
5. Fill and bleed the UUT and connecting pipes.
2 Installation

2.5 Mounting kits

Rack-mount option (Figure 2-5)

There must be enough space at the rear of the instrument for all the cables and pipes. The length of the cables and pipes must allow for the removal and fitment of the instrument. The cooling air of the instrument must not be obstructed. Allow a free flow of air through the equipment rack and around the instrument, especially at high ambient temperatures.

![Figure 2-5 Rack-mounting](image)

**Figure 2-5 Rack-mounting**

**Procedure**

1. Locate instrument in rack mount assembly ①.
2. Secure with the four M3 x 6 screws ②, (maximum length M3 x 8).
3. Support the instrument and connect the cables and pipes.
4. Refer to the electrical connections below before fitting the instrument into the equipment rack.
5. Temporarily locate the two spigots * to each side of the equipment rack.
6. Locate and slide the instrument into the rack.
7. Locate the instrument on the spigots*.
Secure the instrument in the equipment rack with two of the screws and washers (supplied).

Remove the two spigots* and replace with the remaining two screws and washers (supplied).

Panel-mount option (Figure 2-6)

There must be enough space at the rear of the instrument for all the cables and pipes. The length of the cables and pipes must allow for the removal and fitment of the instrument. The cooling air of the instrument must not be obstructed. Allow a free flow of air through the equipment rack and around the instrument, especially at high ambient temperatures.

Procedure

1. Remove the four screws ① from the instrument.
2. Locate the instrument in panel mount assembly.
3. Secure with the four screws ①.
4. Support the instrument and connect the cables and pipes.
5. Refer to the electrical connections below before fitting the instrument into the panel.
6. Secure the instrument in the panel with four screws and washers ②.
2 Installation

2.6 Electrical connections

**WARNING**

ISOLATE THE POWER SUPPLY BEFORE MAKING ANY ELECTRICAL CONNECTIONS TO THE REAR PANEL.

**Caution**

Use the power adaptor supplied with the instrument (GE part no. 191-370). Using other power adaptors may cause over-heating, this can result in a fire.

Connecting (Figure 2-7)

1. Before use, make sure the SELV power adaptor supplied with the instrument is used (GE part number 191-370).
2. Install an accessible power isolator to use as the disconnecting device in the power adaptor supply circuit.
3. The power adaptor input power supply range: 100 - 240VAC, 50 to 60Hz 700mA, Installation Category II.

**Note:** The power adaptor must be supplied by a fused or overload-protected power supply.

4. Connect the power adaptor to the instrument.
5. Switch the power supply on.
6. Check that the front panel display shows the power-up sequence (Ref: section 3.2).

**Note:** After the power-up sequence, the instrument shows the default display on the touch screen. The touch screen divides into a number of mimic keys.

Requirements for rack-mounted and panel-mounted instruments

1. Install an accessible power isolator to use as the disconnecting device in the power adaptor supply circuit.
2. Set the power supply isolator to OFF.
3. Connect the power adaptor before sliding the instrument into the rack.
4. Set the power supply isolator to ON.
5. Check that the front panel display shows the power-up sequence (Ref: section 3.2).
Communication Connections

Connect the applicable connectors into the rear panel communications ports and, if appropriate, secure with the captive screws.

Note: The RS232 and IEEE 488 interfaces are both enabled at power-up. Set the required parameters in Supervisor Setup/communications menu, see Section 3.6.

Figure 2-7, Communication Connectors

1 Power supply adaptor  2 RS232  3 Canbus (option)  4 IEEE488
5 USB B  6 USB A  7 Ethernet (option)

RS232 Interface

When using the RS232 interface, a cable must be connected directly from the instrument to a suitable port on the computer in a ‘point to point’ link.

The pin connections for the 9-pin D-type, RS232 connector and the relationship between the instrument and the RS232 control signals, together with device interconnection interface is shown in Table 2-1. The instrument is configured as Data Circuit Terminating Equipment (DCE).

Table 2-1, RS232 Connections

Handshaking connections
Software handshaking use: TXD, RXD and GND.
Hardware handshaking use: TXD, RXD, GND, CTS, RTS and DTR.
IEEE 488 Interface

The interface complies with IEEE 488 standard.
The IEEE 488 parallel interface connects a computer/controller to one or more PACE1000 instruments and other instruments.
Up to 30 instruments can be connected through a high-speed data bus to the computer/controller.

Note: The length of each IEEE 488 cable must be less than 3 metres to comply with the EMC requirements (Ref: SDS).

Single Unit Installation (Figure 2-8)

1. Connect an IEEE 488 connector/cable assembly to the rear panel of the instrument.
2. Connect the other end of the connector/cable assembly to the IEEE 488 connector on the controller/computer.
3. Change the IEEE 488 communication parameters (Ref: Supervisor set-up, Section 6.7).

Multiple Unit Installation (Figure 2-8)

To install multiple units use stacking plugs to link the first instrument and second instrument as follows.

1. Connector to rear panel of first instrument (Ref Illustration).
2. Connector from controller/computer (Ref Illustration).
3. Connector to rear panel of second instrument (Ref Illustration).
4. Connect the IEEE 488 connector on the controller/computer and the other connector into the next instrument.
5. Repeat this procedure for all the instruments in the system.
6. Use the Supervisor set-up (communications) menu on each instrument to set-up the required communication parameters (Ref: Section 3.8).
2 Installation

Figure 2-8 - IEEE 488 Connection
3 Operation

This section contains quick reference charts detailing all the available functions and the set-up menu.

3.1 Preparation

Make sure the electrical cables and pneumatic pipes comply with the installation requirements (Ref: Section 2).

Before use do the following:

1. If necessary, do the maintenance task (Ref: Section 4).
2. For bench-top, single instrument operation do the following:
   a. Connect the instrument to the electrical supply.
   b. Inspect the pneumatic hoses for damage, ingress of dirt and moisture.
3. Before use, the instrument should be tested.
4. Review and become familiar with the procedure before starting a process on a component or system.

3.2 Power-up sequence

The following sequences of operation shows the instrument display.

Note: The following sequence is an example, the values and selections displayed depend on the range(s) and options enabled in the instrument.

1. Set the power supply to ON.
2. The display shows the power-up sequence.
3. The instrument carries out a self-test.
   a. If the test finds a fault, the display shows an error (Ref: Fault Finding and Testing, Section 5).
4. If the self-test is successful the system enables the touch screen and changes to measure mode.
5. The touch screen shows the measured pressure in the parameters selected in set-up.
6. The instrument is now ready for use.

Do not touch the display screen during power-up
3 Operation

3.3 Measure mode

**PACE Indicator**

1. Pressure reading
2. Functions enabled

Status

Pressing stores settings and exits set-up

Absolute range selection available when barometric option installed.
3 Operation

3.4 Operation and Example Procedures

Introduction

Before operation, the instrument must be connected to the correct electrical and pneumatic/hydraulic supplies, (Ref: Installation, Section 2).

When the instrument is switched ON the display shows measured pressure mode and the task set before the power-off.

Measure Mode

The instrument works as a precision pressure indicator and shows the pressure measured at the output port.

Pressing Task enables pre-determined functions:

Task

The display shows the task screen (Ref: Illustration above).

When selected, e.g. Basic, the screen changes to show the selected task.

To measure pressure in the task proceed as follows:

1. Select the required units of pressure measurement from the measure set-up menu.
**Leak testing option**

This task measures the leak rate over the measure dwell time. At the start of the test, the instrument measures the test pressure of the user system. The instrument then records the pressure change during measure dwell time. On completion, the display shows the leak rate results with leak rate per second or per minute in the current pressure units selected in measure set-up.
3 Operation

3.5 Global Set-up Selections

Global set-up selections provide access to the instrument’s settings for both measure and control modes. This set-up menu provides PIN-protected access to the supervisor set-up and calibration. Pressing Global Set-up changes the touch-screen display to show available selections, Supervisor Set-up, Calibration, Save/Recall User Set-up and Display.
3.6 Supervisor Set-up

3 Operation

3.7 Instrument Status
The control set-up menu provides access to the status of the instrument:

- **Status**
  - Instrument
    - Software installed
    - Hardware build
      - Additions to the standard instrument
        - Calibration
        - Zero
        - Software
        - Hardware
        - Message
        - Ethernet (optional)
    - History
    - Communications
      - IEEE 488 - current settings, see 6.7
      - RS232 - current settings, see 6.7
      - USB
      - Ethernet (optional)
    - Current set-up
  - More
    - Support
      - Contact details

*Pressing the escape key stores settings and returns to status in measure or control set-up.*

Instrument Status:
- Instrument Main code
- Instrument OS Build
- Instrument Boot ROM
- Analogue O/P Main Code
- Analogue O/P Boot Code
- VFC Main Code
- VFC Boot Code
Software
Software history, in the status menu, provides read only information on the current software in the instrument.

Additional selections for options enabled: Analogue etc.
4 Maintenance

4.1 Introduction
This section contains procedures for routine maintenance and the replacement of components (Ref: Testing and Fault Finding, Section 5).

<table>
<thead>
<tr>
<th>Task</th>
<th>Period</th>
</tr>
</thead>
<tbody>
<tr>
<td>Visual Inspection</td>
<td>Before use</td>
</tr>
<tr>
<td>Test</td>
<td>Before use</td>
</tr>
<tr>
<td>Cleaning</td>
<td>Weekly*</td>
</tr>
<tr>
<td>Calibration</td>
<td>12 months †</td>
</tr>
</tbody>
</table>

* may change depends on usage (e.g., rack mounted, bench top) and environment (e.g., humidity, dust). † may change depends on the required accuracy.

4.2 Visual Inspection
Inspect for obvious signs of damage and dirt on the following:
  a. External of the instrument.
  b. Power supply adaptor
  c. Associated equipment.
Damaged parts must be replaced contact GE Service.
For cleaning (Ref: Cleaning Section 4.3).

4.3 Cleaning
Caution

Do not use solvents for cleaning.
Clean the front panel with a damp lint-free cloth and mild detergent.

4.4 Test
Do a standard serviceability test (Ref: Standard Serviceability Test, Section 5.2).

4.5 Calibration
The instrument should be returned to the manufacturer or calibration facility, (Ref: refer to section 6.14.
To find the date of the last calibration, press Measure set-up/Status/Calibration history.
5 Testing and Fault Finding

5.1 Introduction
This section details the standard serviceability test. Table 5.1 lists possible faults, and the response. The PACE1000 contains a self-test and diagnosis system that continuously monitors the performance of the unit. At power-up, the system performs a self-test.

5.2 Standard Serviceability Test
The following procedure shows if the unit is serviceable and checks functions and facilities of the PACE1000.

Procedure

Caution
Always release pressure before disconnecting pressure equipment from the outlet port.

1. Connect the instrument (Ref: Installation, Section 2) Connect a UUT.
2. After power-up, select measure set-up.
   a. Select the required units of pressure measurement from the measure set-up menu.
   b. Apply a known pressure to one of the sensors. Make sure the instrument pressure reading is within tolerance, stated in the specification (Ref: SDS).
   c. Carefully release the applied pressure to atmospheric pressure.
   d. Make sure the instrument pressure reading shows atmospheric or ambient pressure.
   e. Test complete.

After a successful serviceability test the instrument is ready for use.

5.3 Fault Finding
Check the faults and responses (Ref: Table 5.1 Fault Diagnosis) before contacting gesensinginspection.com or a recommended Service Agent.

<table>
<thead>
<tr>
<th>Fault</th>

6 Reference and Specification

6.1 Installation notes

The PACE1000 pressure indicator requires a set of connections with the exception of the reference connection, this provides a reference to atmosphere for gauge sensors and barometric sensors.

The gas density and type does not affect the accuracy of pressure measurement, assuming that the UUT is at the same level (height) as the indicator or gas head correction is accurately set.

Values of air density \((\text{kg m}^{-3})\) for air of relative humidity 50% and containing 0.04% carbon dioxide by volume.

Note: 100 kPa = 1 bar
6 Reference and Specification

6.2 Reference Port

The reference port provides the negative pressure to the gauge sensor and to the barometric reference (option). Gauge sensors use this port identified as “REF”. For gauge sensors (without a barometric reference) small pressures can be applied (Ref: Specification, Section 6-7.). All other pressure measurement requires the port to be opened to atmosphere.

When in gauge mode, the instrument shows and controls the pressure difference between the reference port and the output port.

**Note:** *This is not a true differential operation as there is no true differential calibration of the sensor.*

The transducer of the barometric reference option senses atmospheric pressure via the reference port, when enabled the port MUST be open to atmosphere.

The reference connection should be actively used (differential connection option) for precision low pressure measurement. The instrument measures pressure relative to the pressure at the reference port.

An atmospheric pressure change causes the indicator to adjust the pressure and appears at the pressure output as apparent instability. To keep a stable controlled pressure, the reference port should be restricted. Using a reference port restrictor (snubber), short term ambient pressure variations can be prevented from affecting indicator performance.

The indicator and UUT references should be connected together (using the optional differential connection kit) to provide a common reference to atmosphere.

### Measure Set-up

**Pressure zero**

During use, the instrument pressure sensor can show small zero shifts caused by time and temperature changes. Regular "zeroing" increases measuring precision.

**Process**

Selects display processing features that change the reading, as follows:

- **%**: Pressure can be displayed reading as a percentage of full-scale or as a percentage of a specified span.
- **Filter**: The displayed reading can be filtered by a custom low pass filter or the filter can be disabled *(default disabled)*. The indicator works at a speed independent of the filter time constant.
- **Tare**: A specific tare value can be selected or the current displayed pressure reading can be "captured" as the tare value. The display shows the selected tare value in the pressure window.
- **Peak**: Maximum, minimum and average display of pressure readings.

**Task**

Selecting Task enables a set of pre-determined functions and software enabled optional functions.

**Units**

Select the new units from the list of pressure measurement units. Special units can also be defined *(Ref: Global set-up, Section 6.6, supervisor set-up)*.

**Global set-up**

Ref: Global set-up, Section 6.6.
Set-up zero
Zero from top level screen (main range only).
If other ranges are fitted these can be zeroed by selecting the displayed reading.

Barometric Reference Option
The barometric reference option measures the barometric pressure at the reference port.
Depending on the sensors fitted, it also permits the indicator to operate in either pseudo-gauge or pseudo-absolute mode by the addition of barometric pressure.

6.5 Status
The display shows the following:
  a. Instrument status
     • model
     • serial number
     • MAC address sensor(s)
     • serial number
     • range
     • last calibration date. *
  b. Software build - read only data.
  c. Hardware build - read only data.
  d. History - read only data
     • calibration
     • zero
     • software
     • hardware
     • message
     • ethernet connection.
  e. Communications, IEEE 488 and RS232 are fitted as standard. Additional communication types are options - USB and Ethernet.
  f. Current set-up - read only data.
  g. Support
     • List contact information for support and advice.
6 Reference and Specification

6.6 Global set-up

Supervisor set-up
PIN protected menu (Ref: Supervisor set-up, Section 6.7).

Calibration
PIN protected menu (Ref: Calibration set-up, Section 6.8).

Save/recall user set-up
Save user set-up.
Recall user set-up.

Display
a. Resolution
b. Backlight
c. Audio volume
d. Status area
e. Display Mode
   • Reading (default)
   • Graph.

* The instrument date and time must have been set correctly.
6.7 Supervisor Set-up

The Supervisor menu provides facilities for programming settings. These are usually made during installation as follows:

**Important Note:** A PIN protects the Supervisor menu against unauthorised use. Each instrument on delivery contains the factory set PIN (0268). To continue protecting the supervisor set-up menu the PIN should be changed as soon as possible.

**Alarms**

An alarm can be set to trigger when the pressure exceeds the high alarm or falls below the low alarm. A buzzer sounds when the alarm triggers and the alarm symbol (bell) appears on the display.

**Comms**

Selects the communication port parameters and simultaneous operation of both the RS232 and the IEEE 488 interfaces.

The user can select appropriate settings for communicating with the control computer (PC) and the required command protocol.

**RS232**

Located on the rear panel an external RS232 connection requires the following:

- **Connector:** 9-way ‘D’ female wired as per Table 2-1
- **Communications:** RS232 point-to-point only (daisy chain is not supported)
- **Baud Rate power-up default:** 9600, no parity & handshake = xon/xoff
- **Baud rates selectable:** 2400, 4800, 9600, 19k2, 38k4, 57k6 & 115k2
- **Parity:** None, Odd, Even
- **Flow control:** None, Hardware & xon/xoff
- **Protocols:** PACE SCPI
- **Heritage emulation:** DPI 142/150, DPI 141
- **Terminator:** CR or LF or CR/LF
- **New data up-date rate:** 2 readings per second

**IEEE**

Located on the rear panel an external IEEE 488 connection requires:

- **Connector:** 24-way ‘D’ female wired as IEEE 488 standard
- **Communications:** IEEE488 GPIB
- **Default Address:** 16
- **Protocols:** PACE SCPI
- **Heritage emulation:** DPI 142/150, DPI 141

**Selectable through the user interface.**
6 Reference and Specification

Ethernet
Located on the rear panel an external ethernet connection requires the following:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Connector</td>
<td>Ethernet RJ45</td>
</tr>
<tr>
<td>Protocol</td>
<td>SCPI</td>
</tr>
<tr>
<td>Terminator</td>
<td>CR/LF</td>
</tr>
<tr>
<td>Default Address</td>
<td>Auto IP (0.0.0.0)</td>
</tr>
<tr>
<td>Host name</td>
<td>PACExxxxxx (where xxxxxx = serial number)</td>
</tr>
<tr>
<td>Web Password</td>
<td>0268</td>
</tr>
<tr>
<td>Access control</td>
<td>Open</td>
</tr>
<tr>
<td>Reset LAN Settings</td>
<td>Selected in Supervisor set-up menu</td>
</tr>
</tbody>
</table>

**Head Correction**
Corrects pressure reading for the height difference between instrument reference level and UUT. For accuracy, head correction must be enabled and the parameters set for each sensor:

- for UUT positioned higher than the reference level of the PACE1000 enter a positive height correction.
- for UUT positioned lower than the reference level of the PACE1000 enter a negative height correction.

**Lock Tasks**

**Individual tasks:**
Allows any combination of individual tasks to be disabled.

**Note:** Restricts operation of the instrument to specific tasks or functions, recommended for production procedures.

**All:**
Disables all tasks.

**Change PIN**
Changes the Supervisor PIN: enter the existing PIN, then the new PIN and confirmation of the new PIN.

**Note:** Confirmation of the new PIN permanently replaces the old PIN. Record this new PIN and keep in a safe place. If new PIN is lost it can only be reset by returning the instrument to a GE service centre.

**User defined units**
Permits the user to define a set of units. Following the on-screen prompts special units may be set by selecting a Pascal multiplier and assigning a five character name.
Instrument alias name
Permits the user to define a 20 character alias name for the instrument. The instrument returns this name through the communications interfaces.

Language
Operation in any of the languages refer to the SDS. Further languages can be up-loaded.

Restore as shipped settings
Restores instrument settings to factory default.

Note: Does not affect PIN settings.
6 Reference and Specification

6.8 Calibration

The calibration menu provides facilities for programming settings for maintenance as follows:

**Note:** A PIN protects the Calibration menu against unauthorised use. Each instrument, on delivery, contains the factory set PIN (4321). To continue protecting the supervisor set-up menu, the PIN should be changed as soon as possible.

**sensor correction**
- Selects the range for a three-point calibration routine.

**screen calibration**
- Selects touch screen calibration routine.

**Time & Date**
- Sets instrument clock and date.

**Change PIN**
- Changes the Calibration PIN.
  a. Enter the existing PIN
  b. Enter the new PIN
  c. Confirm the new PIN.

**Note:** Confirmation of the new PIN permanently replaces the old PIN. Record this new PIN and keep in a safe place. If new PIN is lost it can only be reset by returning the instrument to a GE service centre.

6.9 Specification

Refer to the PACE1000 datasheet for details.

**Note:** The data sheet SDS 0014 is contained in the CD shipped with the product.
6.10 Options

Analogue Output Option

The analogue output option provides a selectable output of voltage or current.

Analogue O/P bandwidth = 0.5 x update rate (Hz)

analogue connections

30V maximum with respect to chassis.

Rated output = 24V

To maintain PACE product safety, external circuits connected to the instrument must meet SELV requirements.
6 Reference and Specification

Volts-free Contact Option
The Volts-free Contact option provides a selectable relay contact toggle depending on conditions set in the PACE instrument.

Each selection has three VFC.

Selection of trigger conditions

Voltage-free connections
To maintain PACE product safety, external circuits connected to the instrument must meet SELV requirements.

Relay contacts rated at 30V, 1A resistive/200mA inductive.

Front view of VFC Option PCB connector

15-way female D connector

Selection of trigger conditions
6.11 Installation and Ancillary Equipment Kit

Refer to the PACE1000 datasheet for details.
6 Reference and Specification

6.12 Return Goods/Material Procedure

If the unit requires calibration or is unserviceable return it to the nearest GE Service Centre listed at gesensinginspection.com.

Contact the Service Department, by ‘phone, fax or E-mail to obtain a Return Goods Authorisation (RGA) (Worldwide excluding USA).

In the USA obtain a Return Material Authorization [RMA],

Providing the following information on either a RGA or RMA:

- Product (i.e. PACE1000)
- Serial number
- Details of defect/work to be undertaken
- Calibration traceability requirements
- Operating conditions

Safety Precautions

You must inform GE if the product has been in contact with any hazardous or toxic substance.

The relevant COSHH or in the USA, MSDS, references and precautions to be taken when handling.

Important notice

Service or calibration by unauthorized sources will affect the warranty and may not guarantee further performance.
6.13 Packaging Procedure

1. The instrument should be at zero/ambient pressure.
2. Switch off and isolate the electrical power supply to the instrument.
3. Shut off the pneumatic pressure and vacuum supplies to the instrument.
4. Remove the instrument from the equipment rack to access the rear panel.
5. Disconnect the power supply cable and the pneumatic supply hose assemblies.
6. Stow the power supply cable in the packaging below.
7. Remove any pressure adaptors, diffusers and restrictors.

If available, use the original packing material. When using packing materials other than the original, do the following:

8. Fit protection to all the ports to prevent ingress of moisture and dirt.

**Note:** Use the original red plastic plugs or low tack masking tape.

9. Wrap unit in polyethylene sheeting.
10. Select a double-wall cardboard container.
    - Inside dimensions must be at least 15 cm (6") greater than the equipment
    - The carton must meet test strength requirements of >125 kg (275 lbs).
11. Protect all sides with shock-absorbing material to prevent equipment movement within the container.
12. Seal carton with approved sealing tape.
13. Mark carton “FRAGILE” on all sides, top, and bottom of shipping container.

**Environment**

The following conditions apply for both shipping and storage:

- Temperature range -20°C to +70°C (-4°F to +158°F)
