Continuous product development may make it necessary to change these details without notice.

A new generation of intelligent compact digital infrared thermometers

For a full list of international offices, please visit our website.
The new generation of intelligent, high precision digital infrared thermometers

SOLOnet is the world’s first compact web browser enabled infrared thermometer system offering the user maximum flexibility and connectivity. With SOLOnet the user can configure the thermometer system to suit his individual measurement and control requirements. Live temperature data is displayed on a PC or computer system via the web browser, together with related measurement parameters for ease of configuration. The parameters are easily adjusted and saved using drop-down menus or text windows.

Typically, end users will appreciate the convenience of configuring the thermometer via a standard web browser, such as Internet Explorer or Netscape Navigator. Advanced users and OEMs will benefit from a lower-level interface with direct messaging via Ethernet or addressable RS485.

There are four different thermometer types with choice of operating wavelength, optical variants, laser alignment and measurement ranges to suit the chosen application within the operating range 200 to 1750°C/392 to 3182°F. The measurement span can be selected within the thermometer range, with the minimum measurement span being 50°C/90°F.

Features

- Intelligent, digital infrared thermometers with flexible methods of configuration
- RS485, Web browser or Ethernet interface
- High precision inputs/outputs, both digital and analog formats
- Simple and easy to configure to user requirements
- Field changeable optics without need to recalibrate or any additional parts
- Sapphire window is standard on all models - robust, low maintenance
- Optional laser targeting system, activated remotely or from the thermometer
- Built-in peak picker, track & hold and averager time functions
- Choice of alarm outputs, including ‘insufficient signal’ alarm for ratio thermometers
- Rugged, sealed aluminium housing
- Optional water cooled and air purged mountings and accessories
- Two year warranty

Benefits

- Improve product quality
- Maximize production and throughput
- Improve efficiency
- Reduce energy costs

Advantages of SOLOnet digital thermometers

SOLOnet offers OEMs, system builders and end users virtually limitless flexibility of choice making system integration simpler and easier than before.

- Completely user configurable remotely via web browser, Ethernet or RS485
- Flexibility of choice of inputs/outputs and alarm types
- Flexibility of choice of interface
- Simple, compact installation
- Accurate, repeatable, fast response measurements
- Highly interchangeable
- Traceability of calibration to National Standards

User configurable between four focus distances with robust sapphire protection window as standard.

A wide choice of thermometer protection, cooling and mounting options.

Flexible, choice of interface allows easy access to SOLOnet without the need for special adapters. The system can be configured remotely or from the thermometer via a web browser such as Internet Explorer or Netscape Navigator. Typically, end users will appreciate the convenience of configuring the thermometer via a standard web browser. Advanced users and OEMs will benefit from a lower-level interface with direct messaging via Ethernet or addressable RS485.

SOLOnet is the world’s first compact web browser enabled infrared thermometer system. SOLOnet PC software provides a user-friendly interface to configure, monitor, record and display the temperature measurement data from any SOLOnet digital infrared thermometer system. SOLOnet software is available for free download from the SOLOnet website. SOLOnet is Windows compatible.
The SOLOnet series of infrared thermometers provides cost effective, reliable measurement in a wide variety of process control applications. SOLOnet can be used in stand-alone, single point or multipoint installations with individually, remotely adjustable sub-temperature ranges, current output, emissivity or non-greyness compensation and end user defined alarms settings. Choice of built-in peak picker, track and hold or averager signal processing functions ensures accurate measurement of difficult or complex processes.

The optional DIN-rail mounted SOLOnet Webserver/Ethernet Interface Unit provides the user with a wide choice of configuration, interconnection, system monitoring and maintenance options.

Applications
The SOLOnet series of thermometers are suitable for a wide range of manufacturing and processing industries such as: ferrous and non-ferrous metals, glass, minerals, ceramics, chemicals, electronics and research and development.

Great value, versatile signal processing
Easy user configuration
- Configured from a laptop, PC, PLC or computer system with either temporary or permanent connection
- Stand-alone, single or multipoint systems individually addressable and configurable with independent operation
- SOLOnet Web/Ethernet Interface Unit provides simple system interconnections
- Familiar Windows operating environment
- Set up via standard web browser - no proprietary software required - or from customer/OEM process computer
- Choice of prewired cable assembly lengths for ease of installation
Choice of connectivity, web browser and Ethernet interface

SOLOnet thermometers utilise addressable RS485 communications. With this, a thermometer can communicate either directly with an external customer device or with the optional Land SOLOnet Interface Unit SN-W/E. SN-W/E manages and converts the thermometer’s RS485 messaging so that the user can:

- Use the SN-W/E’s built-in webserver module to monitor and configure the thermometer using normal web browsing software.
- Assign the SN-W/E an IP address, integrate it within the organisational network and communicate with it via Ethernet messaging.
- Change the position of the front-panel mounted switch and communicate ‘straight through’ with addressable RS485.

Current and contact-closure I/O is also fitted to each SOLOnet thermometer as standard and this can be accessed directly or via the SN-W/E customer terminals.

More Features

- Flexible communications
- Set measurement in °C or °F
- Set sub-temperature span within the thermometer range (minimum span 50°C/90°F)
- Extended operating range up to 50°C/90°F lower than the thermometer specified range
- Command input to control time functions
- Provide alarm indications, via two hardware relay outputs and digital interface
- Set emissivity or non-greyness value
- Temperature output via both digital serial RS485 interface and current 0 or 4 to 20mA output
- Trigger alignment laser
- Monitor internal ambient temperature
- Provides diagnostic information – input, output and alarm states can be monitored
- User Calibration facility permits the user to apply a correction to the temperature measurement without disturbing the original factory calibration
- Configuration software supplied with each thermometer

SOLOnet SN1, SN2 and SNR

Focus at 250mm/9.8in
Focus at 500mm/19.7in
Focus at 1000mm/39.4in
Focus at Infinity

Sightings and Dimensional Diagrams

SOLOnet offers a choice of 4 field changeable, fixed-focus optical configurations focused at 250, 500, 1000mm or infinity. The optics are simple to change using a colour coded spacer system for ease of identification - no need for recalibration - no additional parts required.
